

# KMC Hackathon Project Report 1.0

## Project Title: Smart QR-Based Attendance System for Schools

Team Name: Tech Innovators

Team Members: Aayush Sharma, Sneha Gurung, Ritesh Thapa

Mentor: \_\_\_\_\_

### 1. Abstract

Taking attendance manually in classrooms wastes time and may lead to mistakes. Our project presents a QR Code-based Attendance System where students scan a QR code to mark their presence. Attendance is automatically stored in a digital database, making the process faster, more accurate, and paperless.

### 2. Problem Statement

Many schools still use manual attendance registers which take valuable teaching time, can lead to human error, and make report generation difficult. Schools need a quick and reliable digital attendance system.

### 3. Existing System

Teachers call student names and mark attendance in registers, then calculate attendance manually later. This process is time-consuming, error-prone, and does not provide real-time tracking.

### 4. Proposed Solution

We developed a Smart Attendance System where a unique QR code is generated for each class. Students scan the QR code using a mobile device, and attendance is automatically saved in a database. Teachers can view and download attendance reports instantly.

### 5. Objectives

- Reduce time taken for attendance
- Minimize human errors
- Maintain digital attendance records
- Provide easy access to attendance data

## 6. Technology Used

Frontend: HTML, CSS, JavaScript

Backend: Python (Flask) / Node.js

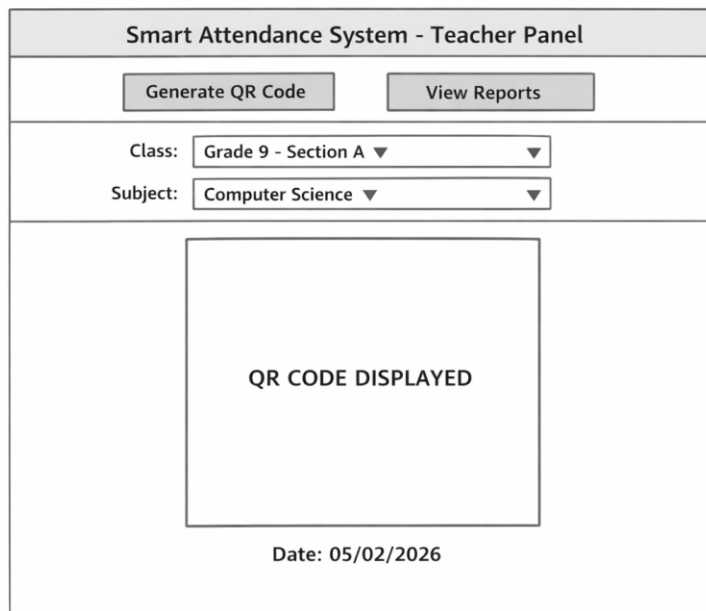

Database: MySQL / Firebase

QR Code Tool: QR Code Generator Library

Devices: Smartphone / Laptop

## 7. System Wireframe

The following wireframes show the basic layout of the system interfaces.

Smart Attendance System - Teacher Panel	
<button>Generate QR Code</button>	<button>View Reports</button>
Class: <input type="text" value="Grade 9 - Section A"/>	<input type="text" value="▼"/>
Subject: <input type="text" value="Computer Science"/>	<input type="text" value="▼"/>
<div>QR CODE DISPLAYED</div>	
Date: 05/02/2026

## 8. Results

After testing, attendance time was reduced from around 7 minutes to less than 1 minute. Records became fully digital and organized, and teachers could easily generate attendance reports.

## 9. Advantages

- Saves classroom time
- Reduces manual effort
- Accurate digital records
- Easy to manage large classes

## 10. Limitations

- Requires internet connection
- Students need access to a smartphone
- Initial technical setup required

## 11. Future Improvements

- Face recognition attendance
- SMS alerts to parents for absentees
- Dedicated mobile app
- Offline attendance sync

## 12. Conclusion

The Smart QR-Based Attendance System modernizes the traditional attendance process using simple technology. It saves time, reduces errors, and helps schools shift toward digital management. This project demonstrates how real-world educational problems can be solved using practical technology solutions.

# How To Open create Git Repository

## ✔ Step 1: Open Your Repository

1. Go to **github.com**
  2. Log in
  3. Click your **repository name** from your profile or dashboard
- 

## ✔ Step 2: Click “Add file”

On the main repo page:

- ☐ Click the “**Add file**” button
  - ☐ Choose “**Upload files**”
- 

## ✔ Step 3: Upload Your Files

You will see an upload page.

You can either:

- **Drag and drop** your project files/folders
- **OR**
- Click “**choose your files**” and select from your computer

📁 You can upload multiple files at once.

---

## ✔ Step 4: Add a Commit Message

Scroll down and you’ll see **Commit changes**

In the message box write something like:

Added KMC Hackathon project files

Leave the option as “**Commit directly to the main branch**”

---

## ✔ Step 5: Click “Commit changes”

Click the green **Commit changes** button. 🎉 Done!

# HOW TO SUBMIT YOUR REPORT

Deadline--- 25<sup>th</sup> Magh

## ✓ How to Share Your GitHub Repository Link

1. Go to **github.com** and log in
2. Open the **repository** you want to share
3. Look at the **address bar** of your browser
4. Copy the full URL

It will look like this:

`https://github.com/your-username/repository-name`

5. Fill out google form using link below:

**<https://tinyurl.com/kmchack01>**

-Upload your report file using above google form.

-paste your repository link in the google form.

### **Repository must contain:**

\*Report File

\*Repo Name as “kmc-hackathon-1.0”

**For Resources & Reference visit:**

**<https://tinyurl.com/kmchackresource01>**
